

Endocrinology in Obstetrics and Gynaecology
Under the auspices of the Mumbai Obstetrics and Gynaecological Society
Sunday 18th February 2018,
Time- 9am to 1 pm
College of Physicians and Surgeons
5th floor auditorium

Very few specialties in medicine have as much cross talk with Endocrinology as is the “Obstetrics and Gynaecology”. Commonest of gynecological concerns ranging from puberty delay, menstrual irregularities, hirsutism, infertility to menopausal issues, can have underlying endocrine masqueraders. Identification and specific management of these underlying endocrinopathies can change patient outcomes drastically. Moreover, the burden of modern epidemic of Diabetes and Thyroid disorders manifest by its spillover presence during pregnancy and present unique management challenges.

We at Department of Endocrinology, KEM Hospital, Mumbai, have always believed that patients are our best teachers. Through years of our patient based learning, we have attempted to devise evidence backed as well as a balanced approach to management of various endocrinopathies that permeate the Obstetrics and Gynecology practice.

We have put together a symposium of few talks to comprehensively address five such patient disorders: Hyperprolactinaemia, Primary amenorrhea, PCOS and Diabetes and Thyroid disorders in pregnancy. Using this esteemed platform of the Mumbai Obstetrics and Gynecological Society’s annual conference, we hope to strengthen bridges and cross talks between the two societies which will definitely translate into greater patient benefits. We do request your presence for the “Endocrinology in Obstetrics and Gynecology” workshop conceived and conducted by Department of Endocrinology, KEM Hospital, Mumbai.
